The Brain with David Eagleman

Neuroscientist David Eagleman explores the wonders of the human brain in a series that reveals the ultimate story of us, why we feel and think the things we do.

"The dramatic story of the brain's role in creating our world, our experience of it, and ourselves; the basis for a PBS television series by the bestselling David Eagleman. How does a three pound mass of biological matter locked in the dark, silent fortress of the skull produce the extraordinary multi-sensory experience that compels us, while also constructing reality and guiding us through the endless need to make decisions and determine our judgments and to we are convinced we are shaping? David Eagleman compares the brain to a cityscape with different neighborhoods where neural networks vie for supremacy and determine our behavior in ways we are not always aware or in control of. At the same time, he suggests that the brain works as a storyteller--creating a narrative that allows us to navigate and make sense of a world that it is busy constructing for us!"--

Locked in the silence and darkness of your skull, your brain fashions the rich narratives of your reality and your identity. Join renowned neuroscientist David Eagleman for a journey into the questions at the mysterious heart of our existence. What is reality? Who are "you"? How do you make decisions? Why does your brain need other people? How is technology poised to change what it means to be human? In the course of his investigations, Eagleman guides us through the world of extreme sports, criminal justice, facial expressions, genocide, brain surgery, gut feelings, robotics, and the search for immortality. Strap in for a whistle-stop tour into the inner cosmos. In the infinitely dense tangle of billions of brain cells and their trillions of connections, something emerges that you might not have expected to see in there: you. This is the story of how your life shapes your brain, and how your brain shapes your life. (A companion to the six-part PBS series. Color illustrations throughout.)

'This is the story of how your life shapes your brain, and how your brain shapes your life.' Join renowned neuroscientist David Eagleman on a whistle-stop tour of the inner cosmos. It's a journey that will take you into the world of extreme sports, criminal justice, genocide, brain surgery, robotics, and the search for immortality. On the way, amidst the infinitely dense tangle of brain cells and their trillions of connections, something emerges that you might not have expected to see: you.

"Eagleman renders the secrets of the brain's adaptability into a truly compelling page-turner." --Khaled Hosseini, author of The Kite Runner "Livewired reads wonderfully like what a book would be if it were written by Oliver Sacks and William Gibson, sitting on Carl Sagan's front lawn." --The Wall Street Journal What does drug withdrawal have in common with a broken heart? Why is the enemy of memory not time but other memories? How can a blind person learn to see with her tongue, or a deaf person learn to hear with his skin? Why did many people in the 1980s mistakenly perceive book pages to be slightly red in color? Why is the world's best archer armless? Might we someday control a robot with our thoughts, just as we do our fingers and toes? Why do we dream at night, and what does that have to do with the rotation of the Earth? The answers to these questions are right behind our eyes. The greatest technology we have ever discovered on our planet is the three-pound organ carried in the vault of the skull. This book is not simply about what the brain is; it is about what it does. The magic of the brain is not found in the parts it's made of but in the way those parts unceasingly reweave themselves in an electric, living fabric. In Livewired, you will surf the leading edge of neuroscience atop the anecdotes and metaphors that have made David Eagleman one of the best scientific translators of our generation. Covering decades of research to the present day, Livewired also presents new discoveries from Eagleman's own laboratory, from synesthesia to dreaming to wearable neurotech devices that revolutionize how we think about the senses.

At once funny, wistful and unsettling, *Sum* is a dazzling exploration of unexpected afterlives--each presented as a vignette that offers a stunning lens through which to see ourselves in the here and now. In one afterlife, you may find that God is the size of a microbe and unaware of your existence. In another version, you work as a background character in other people's dreams. Or you may find that God is a married couple, or that the universe is running backward, or that you are forced to live out your afterlife with annoying versions of who you could have been. With a probing imagination and deep understanding of the human condition, acclaimed neuroscientist David Eagleman offers wonderfully imagined tales that shine a brilliant light on the here and now.

"The authors look at art and science together to examine how innovations--from Picasso's initially offensive paintings to Steve Jobs's startling iPhone-build on what already exists and rely on three brain operations: bending, breaking and blending. This manifesto . . . shows how both disciplines foster creativity." --The Wall Street Journal *The Runaway Species* is a deep dive into the creative mind, a celebration of the human spirit, and a vision of how we can improve our future by understanding and embracing our ability to innovate. David Eagleman and Anthony Brandt seek to answer the question: what lies at the heart of humanity's ability--and drive--to create? Our ability to remake our world is unique among all living things. But where does our creativity come from, how does it work, and how can we harness it to improve our lives, schools, businesses, and institutions? Eagleman and Brandt examine hundreds of examples of human creativity through dramatic storytelling and stunning images in this beautiful, full-color volume. By drawing out what creative acts have in common and viewing them through the lens of cutting-edge neuroscience, they uncover the essential elements of this critical human ability, and encourage a more creative future for all of us. "The Runaway Species approach[es] creativity scientifically but sensitively, feeling its roots without pulling them out." --The Economist

If the conscious mind--the part you consider to be you--is just the tip of the iceberg, what is the rest doing? In this sparkling and provocative new book, the renowned neuroscientist David Eagleman navigates the depths of the subconscious brain to illuminate surprising mysteries: Why can your foot move halfway to the brake pedal before you become consciously aware of danger ahead? Why do you hear your name being mentioned in a conversation that you didn't think you were listening to? What do Ulysses and the credit crunch have in common? Why did Thomas Edison electrocute an elephant in 1916? Why are people whose names begin with J more likely to marry other people whose names begin with J? Why is it so difficult to keep a secret? And how is it possible to get angry at yourself--who, exactly, is mad at whom? Taking in brain damage, plane spotting, dating, drugs, beauty, infidelity, synesthesia, criminal law, artificial intelligence, and visual illusions, *Incognito* is a thrilling subsurface exploration of the mind and all its contradictions.

This book attempts to tackle the mystery of consciousness using examples from physics, mathematics, computer science, artificial intelligence, and electronics. Can a computer think? Why is your consciousness like Bitcoin? Will there be an artificial intelligence apocalypse?

The definitive collection from an Irish literary icon, "one of the masters of the short story" (Newsweek). In the words of W. B. Yeats, Frank O'Connor "did for Ireland what Chekhov did for Russia." Anne Tyler, writing in the Chicago Sun-Times, described his tales as "encapsulated universes." This indispensable volume contains the best of his short fiction, from "Guests of the Nation" (adapted into an Obie Award-winning play) to "The Mad Lomaneys" to "First Confession" to "My Oedipus Complex." Dublin schoolteacher Ned Keating waves good-bye to a charming girl and to any thoughts of returning to his village home in the lyrical and melancholy "Uprooted." A boy on an important mission is waylaid by a green-eyed temptress and seeks forgiveness in his mother's loving arms in "The Man of the House," a tale that draws on O'Connor's own difficult childhood. A series of awkward encounters and humorous misunderstandings perfectly encapsulates the complicated legacy of Irish immigration in "Ghosts," the bittersweet account of an American family's pilgrimage to the land of their forefathers. In these and dozens of other stories, O'Connor accomplishes the miraculous, laying bare entire lives and histories in the space of a few pages. As a writer, critic, and teacher, O'Connor elevated the short story to astonishing new heights. This career-spanning anthology, epic in scope yet brimming with small moments and intimate details, is a true pleasure to read from first page to last.
