Laudato Si 'is Pope Francis' second encyclical which focuses on the theme of the environment. In fact, the Holy Father in his encyclical urges all men and women of good will, the rulers and all the powerful on earth to reflect deeply on the theme of the environment and the care of our planet. This is our common home, we must take care of it and love it - the Holy Father tells us - because its end is also ours.

American medicine attracts some of the brightest and most motivated people the country has to offer, and it boasts the most advanced medical technology in the world, a wondrous parade of machines and techniques such as PET scans, MRI, angioplasty, endoscopy, bypasses, organ transplants, and much more besides. And yet, writes Dr. Eric Cassell, what started out early in the century as the exciting conquest of disease, has evolved into an overly expensive, over technologized, uncaring medicine, poorly suited to the health care needs of a society marked by an aging population and a predominance of chronic diseases. In *Doctoring: The Nature of Primary Care Medicine*, Dr. Cassell shows convincingly how much better fitted advanced concepts of primary care medicine are to America's health care needs. He offers valuable insights into how primary care physicians can be better trained to meet the needs of their patients, both well and sick, and to keep these patients as the focus of their practice. Modern medical training arose at a time when medical science was in ascendancy, Cassell notes. Thus the ideals of science--objectivity, rationality--became the ideals of medicine, and disease--the target of most medical research--became the logical focus of medical practice. When clinicians treat a patient with pneumonia, they are apt to be thinking about pneumonia in general--which is how they learn about the disease--rather than this person's pneumonia. This objective, rational approach has its value, but when it dominates a physician's approach to medicine, it can create problems. For instance, treating chronic disease--such as rheumatoid arthritis, diabetes, stroke, emphysema, and congestive heart failure--is not simply a matter of medical knowledge, for it demands a great deal of effort by the patients themselves: they have to keep their doctor appointments, take their medication, do their exercises, stop smoking. The patient thus has a profound effect on the course of the disease, and so for a physician to succeed, he or she must also be familiar with the patient's motivations, values, concerns, and relationship with the doctor. Many doctors eventually figure out how to put the patient at the center of their practice, but they should learn to do this at the training level, not haphazardly over time. To that end, the training of primary care physicians must recognize a distinction between doctoring itself and the medical science on which it is based, and should try to produce doctors who rely on both their scientific and subjective assessments of their patients' overall needs. There must be a return to careful observational and physical examination skills and finely tuned history taking and communication skills. Cassell also advocates the need to teach the behavior of both sick and well persons, evaluation of data from clinical epidemiology, decision making skills, and preventive medicine, as well as actively teaching how to make technology the servant rather than the master, and offers practical tips for instruction both in the classroom and in practice. Most important, *Doctoring* argues convincingly that primary care medicine should become a central focus of America's health care system, not merely a cost-saving measure as envisioned by managed care organizations. Indeed, Cassell shows that the primary care physician can fulfill a unique role in the medical community, and a vital role in society in general. He shows that primary care medicine is not a retreat from scientific medicine, but the natural next

step for medicine to take in the coming century.

"A dark, crooked beauty that fulfills all the promise of *White Oleander* and confirms that Janet Fitch is an artist of the very highest order." --Los Angeles Times Book Review Josie Tyrell, art model, runaway, and denizen of LA's rock scene finds a chance at real love with Michael Faraday, a Harvard dropout and son of a renowned pianist. But when she receives a call from the coroner, asking her to identify her lover's body, her bright dreams all turn to black. As Josie struggles to understand Michael's death and to hold onto the world they shared, she is both attracted to and repelled by his pianist mother, Meredith, who blames Josie for her son's torment. Soon the two women are drawn into a twisted relationship that reflects equal parts distrust and blind need. With the luxurious prose and fever pitch intensity that are her hallmarks, Janet Fitch weaves a spellbinding tale of love, betrayal, and the possibility of transcendence. "Lushly written, dramatically plotted. . . Fitch's Los Angeles is so real it breathes." --Atlantic Monthly "There is nothing less than a stellar sentence in this novel. Fitch's emotional honesty recalls the work of Joyce Carol Oates, her strychnine sentences the prose of Paula Fox." --Cleveland Plain Dealer "A page-turning psychodrama. . . . Fitch's prose penetrates the inner lives of [her characters] with immediacy and bite." --Publishers Weekly (starred review) "Fitch wonderfully captures the abrasive appeal of punk music, the bohemian, sometimes squalid lifestyle, the performers, the drugs, the alienation. This is crackling fresh stuff you don't read every day." --USA Today "In dysfunctional family narratives, Fitch is to fiction what Eugene O'Neill is to drama." --Chicago Sun-Times "Riveting. . . . An uncommonly accomplished page-turner." --Elle
