The Atoms & Chemical Bonding Student Learning Guide includes self-directed readings, easy-to-follow illustrated explanations, guiding questions, inquiry-based activities, a lab investigation, key vocabulary review and assessment review questions, along with a post-test. It covers the following standards-aligned concepts: Models of the Atom; Atomic Configuration & Bonding; Chemical Bonding; Ionic Bonding; Ionic Compounds; Covalent Bonding; Covalent Compounds; Naming Compounds; and Metallic Bonding. Aligned to Next Generation Science Standards (NGSS) and other state standards.

Passing the HESI Admission Assessment Exam is the first step on the journey to becoming a successful healthcare professional. Be prepared to pass the exam with the most up-to-date HESI Admission Assessment Exam Review, 5th Edition! From the testing experts at HESI, this user-friendly guide walks you through the topics and question types found on admission exams, including: math, reading comprehension, vocabulary, grammar, biology, chemistry, anatomy and physiology, and physics. The guide includes hundreds of sample questions as well as step-by-step explanations, illustrations, and comprehensive practice exams to help you review various subject areas and improve test-taking skills. Plus, the pre-test and post-test help identify your specific weak areas so study time can be focused where it's needed most. Easy-to-read format with consistent section features (introduction, key terms, chapter outline, and a bulleted summary) help you organize your review time and understand the information. NEW! Updated, thoroughly reviewed content helps you prepare to pass the HESI Admission Assessment Exam. NEW! Comprehensive practice exams with over 200 questions on the Evolve companion site help you become familiar with the types of test questions.

Prentice Hall Physical Science: Concepts in Action helps students make the important connection between the science they read and what they experience every day. Relevant content, lively explorations, and a wealth of hands-on activities take students' understanding of science beyond the page and into the world around them. Now includes even more technology, tools and activities to support differentiated instruction!

This book lists and reviews the most useful Web sites that provide information on key topics in chemistry.

In Building Academic Vocabulary: Teacher's Manual, Robert J. Marzano and Debra J. Pickering give teachers a practical way to help students master academic vocabulary. Research has shown that when teachers, schools, and districts take a systematic approach to helping students identify and master essential vocabulary and concepts of a given subject area, student comprehension and achievement rises. In the manual, readers will find the following tools: * A method to help teachers, schools, and districts determine which academic vocabulary terms are most essential for their needs * A six-step process for direct instruction in subject area vocabulary * A how-to to help students use the Building Academic Vocabulary: Student Notebook. The six-step method encourages students to learn critical academic vocabulary by connecting these terms to prior knowledge using linguistic and non-linguistic means that further encourage the refinement and deepening of their understanding. * Suggestions for tailoring academic vocabulary procedures for English Language Learners. * Samples and blackline masters for a variety of review activities and games that reinforce and refine student understanding of the academic terms and concepts they learn. The book also includes a list of 7,923 vocabulary terms culled from the national standards documents and other publications, organized into 11 subject areas and 4 grade-level categories. Building Academic Vocabulary: Teacher's Manual puts into practice the research and ideas outlined in Marzano's previous book Building Background Knowledge for Academic Achievement. Using the teacher's manual and vocabulary notebooks, educators can guide students in using tools and activities that will help them deepen their own understanding of critical academic vocabulary--the building blocks for achievement in each discipline.

Designed for students in Nebo School District, this text covers the Utah State Core Curriculum for chemistry with few additional topics.

A bullet dropped and a bullet fired from a gun will reach the ground at the same time. Plants get the majority of their mass from the air around them, not the soil beneath them. A smartphone is made from more elements than you. Every day, science teachers get the opportunity to blow students' minds with counter-intuitive, crazy ideas like these. But getting students to understand and remember the science that explains these observations is complex. To help, this book explores how to plan and teach science lessons so that students and teachers are thinking about the right things—that is, the scientific ideas themselves. It introduces you to 13 powerful ideas of science that have the ability to transform how young people see themselves and the world around them. Each chapter tells the story of one powerful idea and how to teach it alongside examples and non-examples from biology, chemistry and physics to show what great science teaching might look like and why. Drawing on evidence about how students learn from cognitive science and research from science education, the book takes you on a journey of how to plan and teach science lessons so students acquire scientific ideas in meaningful ways. Emphasising the important relationship between curriculum, pedagogy and the subject itself, this exciting book will help you teach in a way that captivates and motivates students, allowing them to share in the delight and wonder of the explanatory power of science.
