The science of genetics is less than 150 years old, but its accomplishments within that short time have been astonishing. Gregor Mendel first described genes as abstract units of inheritance in 1865; his work was ignored and then rediscovered in 1900.

Such small genomes within Genlisea can be attributed to genome contraction during its evolution through gene loss, and reduction of lengths of introns (non-coding DNA) and intergenic regions (stretches of DNA sequences in between genes) over time.
