The present paper will review the recent progress in research on the structural chemistry and the bioactivities of these marine algal biomaterials. In particular, it will provide an update on the structural chemistry of the major sulfated polysaccharides synthesized by seaweeds including the galactans (e.g., agarans and carrageenans), ulvans, and fucans.

marine biomaterials characterization isolation and ...

Several marine biomaterials are currently being proposed for the sustained delivery of bioactive compounds, often triggered by external stimuli, which may be combined with polymeric matrices for cell culture, on the development of the so-called functional biopolymers.

Functional Marine Biomaterials | ScienceDirect

Marine biomaterials have been fabricated to nanofibrous matrices by many researchers, and explored for various tissue engineering applications such as bone, cartilage, and skin tissue regeneration. Alginate is one of the great candidates for preparing nanofibrous matrices for tissue engineering.

Strategies to Maximize the Potential of Marine ...

Marine biomaterials are a new emerging area of research with signicant applications. Recently, researchers have paid a considerable attention to marine-derived biomaterials for various applications. Marine biotechnology is a relatively new field that involves the discovery and application of products and processes derived from marine organisms. Its promising future reflects the tremendous biodiversity of the world's oceans and seas that cover more than three-quarters of the earth's surface. Most major groups of living organisms primarily or exclusively are marine, and the demands of their environment have led these organisms to evolve unique structures, metabolic pathways, reproductive ...
