(124 pages) Brand: LG ...

The Innovation Manual provides a solution to the problems faced by those at the forefront of innovation. It takes you through the seven topics that have the highest impact on the success of value innovation, be this innovation a new product, a new service or a new business model. The seven topics are: - Creating advantage in the minds of many - Chartering innovation within the organization - Preparing, developing and supporting the right team - Placing customers at the centre of innovation - Changing the organization to deliver the innovation - Motivating the right partners and sharing the returns - Building momentum in the market Each topic is linked to an organized toolkit that allows managers to apply this knowledge immediately. The tools sit within an overall framework to show how they build on and reinforce one another. Along with this, the book guides busy managers on applying the tools properly, detailing the relevance of each for specific industries, and how to customize them when necessary.

The term "zooplankton" describes the community of floating, often microscopic, animals that inhabit aquatic environments. Being near the base of the food chain, they serve as food for larger animals, such as fish. The ICES (International Council for the Exploration of the Sea) Zooplankton Methodology Manual provides comprehensive coverage of modern techniques in zooplankton ecology written by a group of international experts. Chapters include sampling, acoustic and optical methods, estimation of feeding, growth, reproduction and metabolism, and up-to-date treatment of population genetics and modeling. This book will be a key reference work for marine scientists throughout the world. Sampling and experimental design Collecting zooplankton Techniques for assessing biomass and abundance Protozooplankton enumeration and biomass estimation New optical and acoustic techniques for estimating zooplankton biomass and abundance Methods for measuring zooplankton feeding, growth, reproduction and metabolism Population genetic analysis of zooplankton Modelling zooplankton dynamics This unique and comprehensive reference work will be essential reading for marine and freshwater research scientists and graduates entering the field.

Includes a description of the Gammaproteobacteria (1203 pages, 222 figures, and 300 tables). This large taxon includes many well known medically and environmentally important groups. Especially notable are the Enterobacteriaceae, Aeromonas, Beggiatoa, Chromatium, Legionella, Nitrococcus, Oceanospirillum, Pseudomonas, Rickettsiella, Vibrio, Xanthomonas and 155 additional genera.
