The life sciences deal with a vast array of problems at different spatial, temporal, and organizational scales. The mathematics necessary to describe, model, and analyze these problems is similarly diverse, incorporating quantitative techniques that are rarely taught in standard undergraduate courses. This textbook provides an accessible introduction to these critical mathematical concepts, linking them to biological observation and theory while also presenting the computational tools needed to address problems not readily investigated using mathematics alone.

Proven in the classroom and requiring only a background in high school math, Mathematics for the Life Sciences doesn't just focus on calculus as do most other textbooks on the subject. It covers deterministic methods and those that incorporate uncertainty, problems in discrete and continuous time, probability, graphing and data analysis, matrix modeling, difference equations, differential equations, and much more. The book uses MATLAB throughout, explaining how to use it, write code, and connect models to data in examples chosen from across the life sciences. Provides

Sciences boldly investigates the female condition, bodily autonomy, and the failings of modern medicine as one young woman confronts a centuries-old, matrilineal curse. Ninon Moise is cursed. So is her mother Esther, as was every eldest female member of her family going back to the Middle Ages. Each generation is marked by a uniquely obscure disease, illness, or ailment—one of her ancestors was patient zero in the sixteenth-century dancing plague of Strasbourg, while Esther has a degenerative eye disease. Ninon grows up comforted and fascinated by the recitation of these

bizarre, inexplicable medical mysteries, forewarned that something will happen to her, yet entirely unprepared for how it will alter her life. Her own entry into this litany of maladies appears one morning in the form of an excruciating burning sensation on her skin, from her wrists to her shoulders. Embarking on a dizzying and frustrating cycle of doctors, specialists, procedures, needles, scans, and therapists, seventeen-year-old Ninon becomes consumed by her need to receive a diagnosis and find a cure for her ailment. She seeks to break the curse and

reclaim her body by any means necessary, through increasing isolation and failed treatment after failed treatment, even as her life falls apart. A provocative and empathic questioning of illness, remedy, transmission, and health, Life Sciences poignantly questions our reliance upon science, despite its limitations, to provide all the answers.
