examines the economics of road transport and more focused areas such as containerisation.

This book, first published in 1980, covers the employment of merchant seamen, principally from the perspective of a labour lawyer, but including a great deal of material not normally found in books on labour law. It also shows how the law is but one kind of rule; that the collective organisations of works and employers create and enforce rules of industrial practice that have just as important an effect on the lives of those they cover.

There has been much international effort to improve or transform Vocational and Technical Education (VTE). However, the outcomes often remain elusive. VTE continues to be largely shunned by society as a sector of education for low-achievers

and academic failures. A Breakthrough in VTE: The Singapore Story shares the Singapore experience that was made possible through strategic planning, organisational excellence, innovation and ingenuity. It is a compelling story of how the Institute of Technical Education (ITE) began to transform lives and change its image over a period of fifteen years (1992–2007). This book, based on a first-hand CEO account, vividly captures the sort of leadership, policy choices, fundamental principles and capabilities in the journey of transformation. The details of the "what, when, how and why" are a valuable guide for leaders and practitioners in building quality and sustainable VTE systems which are responsive to social and economic needs.

no one vocational training model can be transported wholesale from one country to another, this book provides a great service by highlighting the important issues that any successful system has to address. With this insightful book, Dr Law has now made it much easier for other countries to learn from and adapt Singapore's experience. This is invaluable to everyone keen on promoting economic transformation, particularly in Africa." Dr Yaw Ansu Chief Economist, African Center for Economic Transformation (ACET) and Former Director for Human Development, the Africa Region, the World Bank "Dr Law's acute analysis of the Singapore long-term education policy towards technical education goes far beyond theoretical considerations. It opens credible and practical ways all policy-makers in charge of education and of economic affairs would be well inspired to

reflect upon if not to adopt. A great

achievement indeed!" Dr Jean-Etienne
Berset Director General University of

"This book is indeed a 'must' for all policy-
makers and experts who wish to develop
their country into a modern, competitive
nation. Many countries are inspired by the
German model of 'dual training' in
apprenticeship. The Singapore story shows
that an individually adapted institution-
based training model can be just as
successful. It is an alternative pathway to
success — not only for a nation but also for
the individual." Hartmut Mattes Minister
Advisor, Ministry of Education, Youth
and Sports Baden-Württemberg, Germany

nearly a quarter of the country's school cohort. The 'what, when, how and why' account of what was done to achieve this result during Dr Law's tenure as the Chief Executive Officer of the Institute of Technical Education (ITE) is both exhilarating and encouraging. I highly recommend the book to all who wish to distil lessons from Singapore's experience in technical and vocational education and training." Tan Jee Peng Former Advisor Education Department, Human Development Network, World Bank

Taking an international and comparative perspective, this book focuses on the relationship between industrial training and technological change in three major global economies – the UK, USA and Japan. The contributors, an international group of leading researchers, look at the origins and development of training in

these countries, and analyse the benefits resulting from the interaction of a skilled workforce and technological change. This analysis of training in major industrial nations reveals the full complexity of the relationship between labour and technological change. It shows the value of an approach which is both historical and comparative, and highlights the importance of education and training as a necessary basis for successful innovation.
