An full colour illustrated user's manual for the Panasonic Lumix DMC FZ300/330 camera covering both the basic camera set up in the full auto (intelligent auto) and all the other, semi automatic and manual modes. Plenty of illustrations and examples of the effects of the control settings and extensive background information on the image taking process with this camera. Advise on how to take pictures in any situation and practical advice for recording video and audio with this camera from lighting and external microphone choice. Practical hints and tips for advancing your photography with access to more tutorials and web based information.

I'm loud, I'm proud, and I like to bust balls in my spare time. At least, that's what Low Parker would do. But she is just a mask, one I have perfected over years of running. I am Willow Knoxx. Master of deception, secrets, and lies. I am the girl your mother told you to stay away from, and the girl your father fantasized about. I have been running for years, always looking over my shoulder. Hoping I wasn't going to be found.But hiding comes with a price. Now, the mask I have perfected is about to disappear, and everything I have done to keep myself hidden is about to be revealed. How far are you willing to go to hide from your past in order to protect your future?I'm willing to die to protect the ones I love.I'm willing to go to the ends of the earth to stop my past from finding us.Even if it kills me.

Ideal gift for the professional in your life - 6x9 119 page custom notebook - perfect for secret santa or a co-worker colleague - unique specialist personalised gift!

Every day, about 1,600 people are released from prisons in the United States. Of these 600,000 new releasees every year, about 480,000 are subject to parole or some other kind of postrelease supervision. Prison releasees represent a challenge, both to themselves and to the communities to which they return. Will the releasees see parole as an opportunity to be reintegrated into society, with jobs and homes and supportive families and friends? Or will they commit new crimes or violate the terms of their parole contracts? If so, will they be returned to prison or placed under more stringent community supervision? Will the communities to which they return see them as people to be reintegrated or people to be avoided? And, the institution of parole itself is challenged with three different functions: to facilitate reintegration for parolees who are ready for rehabilitation; to deter crime; and to apprehend those parolees who commit new crimes and return them to prison. In recent decades, policy makers, researchers, and program administrators have focused almost exclusively on "recidivism," which is essentially the failure of releasees to refrain from crime or stay out of prison. In contrast, for this study the National Institute of Justice (NIJ) of the U.S. Department of Justice asked the National Research Council to focus on "desistance," which broadly covers continued absence of criminal activity and requires reintegration into society. Specifically, the committee was asked (1) to consider the current state of parole practices, new and emerging models of community supervision, and what is necessary for successful reentry and (2) to provide a research agenda on the effects of community supervision on desistance from criminal activity, adherence to conditions of parole, and successful reentry into the community. To carry out its charge, the committee organized and held a workshop focused on traditional and new models of community supervision, the empirical underpinnings of such models, and the infrastructure necessary to support successful reentry. Parole, Desistance from Crime, and Community Integration also reviews the literature on desistance from crime, community supervision, and the evaluation research on selected types of intervention.

In the face of tougher federal regulations, ever-changing JCAHO standards, bioterrorist threats, evolving pandemics, large-scale disasters, emerging infectious diseases, and multidrug-resistant organisms, your hospital's IC efforts are more critical then ever before. Meet these complex new challenges head on with the newly revised and updated edition of Infection Control Manual for Hospitals.

Multiple factor analysis (MFA) enables users to analyze tables of individuals and variables in which the variables are structured into quantitative, qualitative, or mixed groups. Written by the co-developer of this methodology, Multiple Factor Analysis by Example Using R brings together the theoretical and methodological aspects of MFA. It also includes examples of applications and details of how to implement MFA using an R package (FactoMineR). The first two chapters cover the basic factorial analysis methods of principal component analysis (PCA) and multiple correspondence analysis (MCA). The next chapter discusses factor analysis for mixed data (FAMD), a little-known method for simultaneously analyzing quantitative and qualitative variables without group distinction. Focusing on MFA, subsequent chapters examine the key points of MFA in the context of quantitative variables as well as qualitative and mixed data. The author also compares MFA and Procrustes analysis and presents a natural extension of MFA: hierarchical MFA (HMFA). The final chapter explores several elements of matrix calculation and metric spaces used in the book.

Dana Cabot's life begins to unravel when she discovers the truth surrounding the disappearance of her seven-year-old daughter Bailey, forcing her to realize her own part in the tragedy and make a decision that could further destroy her family. Original.

Geofluids: Developments in Microthermometry, Spectroscopy, Thermodynamics, and Stable Isotopes is the definitive source on paleofluids and the migration of hydrocarbons in sedimentary basins—ideal for researchers in oil and gas exploration. There's been a rapid development of new non-destructive analytical methods and interdisciplinary research that makes it difficult to find a single source of content on the subject of geofluids. Geoscience researchers commonly use multiple tools to interpret geologic problems, particularly if the problems involve fluid-rock interaction. This book perfectly combines the techniques of fluid inclusion microthermometry, stable isotope analyses, and various types of spectroscopy, including Raman analysis, to contribute to a thorough approach to research. Through a practical and intuitive step-by-step approach, the authors explain sample preparation, measurements, and the interpretation and analysis of data related to thermodynamics and mineral-fluid equilibria. Features working examples in each chapter with step-by-step explanations and calculations Broad range of case studies aid the analytical and experimental data Includes appendices with equations of state, stable isotope fractionation equations, and Raman identification tables that aid in identification of fluid inclusion minerals Authored by a team of expert scientists who have more than 60 years of related experience in the field and classroom combined
