Scilab by Example by - Amazon.ae
In the example above, the function f is a vector and x is function argument and index. Evaluating function f in the Scilab console, for different values of x is not very efficient and it's time consuming. A better way to do it is to use a conditional loop. This means that we will evaluate an instruction repeatedly until a condition is satisfied.

Scilab programming – FOR loops – x-engineer.org
Let's understand "for" and "while" loops in Scilab by taking a simple example of finding the sum of the first 10 numbers. In the "for" loop, commands are executed repeatedly until i takes all the values in the specified range or in the specified row vector.
