Moreover, both forms can be used to make predictions about the future.

Space radar, infrared photography, carbon dating, DNA analysis, microfilm, digital data bases--we have better technology than ever for studying and preserving the past. And yet the by-products of technology threaten to destroy--in one or two generations--monuments, works of art, and ways of life that have survived thousands of years of hardship and war. This paradox is central to our age. We use the Internet to access and assess infinite amounts of information--but understand less and less of its historical context. Globalization may eventually benefit countries around the world; it will also, almost certainly, lead to the disappearance of hundreds of regional dialects, languages, and whole societies. In *The Future of the Past*, Alexander Stille takes us on a tour of the past as it exists today and weighs its prospects for tomorrow, from China to Somalia to Washington, D.C. Through incisive portraits of their protagonists, he describes high-tech struggles to save the Great Sphinx and the Ganges; efforts to preserve Latin within the Vatican; the digital glut inside the National Archives, which may have lost more information in the information age than ever before; an oral culture threatened by a "new" technology: writing itself. Wherever it takes him, Stille explores not just the past, but our ideas about the past, how they are changing--and how they will have to change if our past is to have a future.

Ordinary women search for meaning, love, and what is truly important in their lives in a collection of short fiction that includes the story of a single mother who ignores chances to find her own happiness while devoting herself to her selfish children.

Ukraine is in the midst of the worst international crisis in East-West relations since the Cold War, and history itself has become a battleground in Russia-Ukraine relations. The Future of the Past shows how the study of Ukraine's past enhances our understanding of Europe, Eurasia, and the world past, present, and future."

History, Koselleck asserts, emerged in the crucial moment of modernity as a new temporality providing distinctly new ways of assimilating experience. This exploration of the concept of historical time considers the perceived relationships between the present (once the future) & the past (once the present).

With architects and urbanists redefining contemporary design and recovering the historic language associated with traditional architecture and the city, there is a hot debate concerning the focus and mission of historic preservation. In *The Future of the Past*, Semes makes a persuasive case that context matters and that new buildings and additions to old buildings should be harmonious with their neighbors. The book includes detailed case studies of preservation projects from the Louvre and the United States Capitol to Soldier Field in Chicago.

Discusses the relationships between the past and present and history and fiction, and looks at the role of the historian

In this final book of the trilogy, award-winning journalist, Dr. Donna Clovis, writes from Einsteins lecture hall and takes classes in physics at Princeton University. Here, she recounts stories of Princeton, New Jersey through its current events by means of citizen interviews, diaries, and articles that demonstrate a microcosm of modern-day America. Using theoretical physics, relativity from Einstein, and synchronicity from Jung, *The Future is My Past*, explores time travel to reveal a special connection with the past that projects an important memory into the present lives of its characters. This memory like a twilight sonata, sings a repetitive lullaby resonating a secret the reader must discover in the text on their journey through the last book of the trilogy.

The term 'temporality' often refers to the traditional mode of the way time is: a linear procession of past, present and future. As philosophers will note, this is not always the case. Christine Ross builds on current philosophical and theoretical examinations of time and applies them to the field of contemporary art: films, video installations, sculpture and performance works. Ross first provides an interdisciplinary overview of contemporary studies on time, focusing on findings in philosophy, psychology, sociology, communications, history, postcolonial studies, and ecology. She then illustrates how contemporary artistic practices play around with what we consider linear time. Engaging the work of artists such as Guido van der Werve, Melik Ohanian, Harun Farocki, and Stan Douglas, allows investigation through the art, as opposed to having art taking an ancillary role. *The Past is the Present; It's the Future Too* forces the reader to understand the complexities of the significance of temporal development in new artistic practices.
