"If I were still teaching introductory computer graphics, I would not hesitate to use this textbook as it has just the right amount of coverage of the topic for a semester course and is presented in a highly appealing manner to engage the reader." □ Gary Bertoline, PhD, Distinguished Professor of Computer Graphics Technology, Purdue University, USA Graphics-based 3D modeling and animation are relevant not only in the motion picture and video game industries, but also in many other disciplines including creative arts, engineering, architecture, education, medicine, etc. Understanding the basics of 3D modeling and animation requires understanding some basic concepts in physics and math. While some books assume the readers' prior knowledge of these concepts, but 3D Modeling & Animation: A Primer explains these important concepts in a visually engaging manner. This book is not just for university students, but for anyone with an interest in computer graphics modeling and animation. Using a Software-Agnostic approach, this book and focuses on the modeling and animation concepts spanning

across multiple software platforms. Employing a balanced approach that is neither too technical nor too artistic, this book instills the need for creativity and visual composition in animation. KEY FEATURES: □ Uses a simple, clear, and concise approach to explain the basics of modeling and animation □ Two hundred plus vibrant images to easily understand and appreciate complex concepts □ Review questions at chapter ends to help readers better review the content AUTHOR: Magesh Chandramouli is a Professor of Computer Graphics Technology at Purdue University Northwest and is a Distinguished Visiting Faculty of Computer Graphics at Feng Chia University, Taiwan. He is currently serving as the Director of Programs of the Engineering Design Graphics Division of the American Society for Engineering Education. He was a Frederick Andrews Fellow at Purdue University, West Lafayette, where he completed his Ph.D. He received Master of Science from the University of Calgary, Canada, Master of Engineering from the National University of Singapore, and B.E. from College of Engineering, Guindy, India. He has received National and International awards for his scholarly accomplishments and has delivered invited lectures in reputed universities and research centers around the world.

\* Problem-solving principles and strategies are introduced in chapter one and are used consistently throughout the text. \* Of Further Interest sections appear at the end the chapter, and cover current topics that are exciting for students but are not typically part of the standard curriculum. \* Statement Headings provide the students with a clear idea of the concept being discussed and are useful when reviewing for exams. \* Applications motivate the discussion of the mathematics and increase student interest in the material. \* Quiz Yourself questions are found throughout each section, and allow students to gauge their level of understanding before moving on to the next concept. \* Some Good Advice is a feature that provides students with timely hints, tips, cautions and warnings about the material being covered. \* Highlights are boxed features that consist of historical notes or biographical vignettes, uses of technology, and interesting applications.
