This book seeks to address this issue, providing: Understanding of the fundamental forces that cause disasters: the biases, blind spots and bonuses. This understanding is drawn from the disciplines of economics/finance and psychology; Explanation of the structures of risk governance and common challenges experienced in their use e.g. board risk committee, risk/compliance function, assurance function, risk appetite statement, risk disclosures; Thorough investigation of risk culture and its importance in risk governance, including the assessment of risk culture; Understanding of the mechanisms of executive compensation and how they link to risk management – one of the most difficult challenges confronting both risk and remuneration committees; Explanation of the risk management process (based on international standards ISO31000), including practical guidance on risk communication, analysis and treatment; Guidance on the management of strategic risk, emphasising the importance of scenario analysis; Application of these principles to cyber risk, climate risk – two pervasive risks affecting almost every organisation; Numerous case studies and examples drawn from various industries around the world; and Discussion of what has been learned about risk governance from the COVID-19 experience. The book is an essential guide for postgraduate students; participants in professional education programs in governance and risk management; directors; senior executives; risk, compliance and assurance professionals as well as conduct and prudential regulators worldwide.
